

homework1

The screenshot shows an IDE (IntelliJ IDEA) with a project named 'taco-cloud-01'. The main file is 'TacoCloudApplication.java', which is a Spring Boot application. The code is as follows:

```
1 package tacos;  
2  
3 import ...  
4  
5 @SpringBootApplication // <1>  
6 public class TacoCloudApplication {  
7  
8     public static void main(String[] args) { SpringApplication.run(TacoCloudApplication.class, args); }  
9  
10 }
```

The Maven panel on the right shows the project dependencies, including Spring Boot and Tomcat. The Run panel at the bottom shows the application running on 'localhost:8080'. The terminal output is as follows:

```
